Appendix C - Construction Details

November 2017
TABLE OF CONTENTS

THRUST BLOCKS

Anchorage for 11-1/4°, 22-1/2° & 45° Upper Vertical Bends ......................... AV-01
Buttresses for 11-1/4° Horizontal Bend .......................................................... BB-01
Buttresses for 22-1/2° Horizontal Bend ......................................................... BB-02
Buttresses for 45° Horizontal Bend .............................................................. BB-03
Buttresses for 90° Horizontal Bend .............................................................. BB-04
Buttresses for Tees, Plugs and Caps ............................................................ BT-01
Buttresses for 11-1/4°, 22-1/2° & 45° Lower Vertical Bends ....................... BV-01

GENERAL CONSTRUCTION

Pipe Embedment and Backfill for Ductile Iron Pipe ................................. G-01
Pipe Embedment and Backfill for Plastic Pipe ......................................... G-02
Typical Gate Valve and Valve Box ............................................................. G-03
Standard Concrete Cradle and Encasement ............................................. G-04
Steel Casing Detail ..................................................................................... G-05
Sanitary Sewer Design Calculation Sheet ............................................. G-06

SEWER CONSTRUCTION

Combination Air/Vacuum Release Valve for Sewage Force Main ............ SC-01
Waterproof Manhole Insert ...................................................................... SC-02
External Manhole Chimney Seal ............................................................. SC-03
Internal Manhole Chimney Seal ................................................................. SC-04
Standard 4’ ID Precast Concrete Manhole .............................................. SC-05
Typical 5’ and 6’ Diameter Pre-Cast Concrete Manhole with 4’ Stack .... SC-06
Typical 4’ Manhole with Outside Drop Connection ................................ SC-07
Inside Drop Manhole ................................................................................ SC-07A
Standard Sanitary Sewer Service Lateral Connection ........................... SC-08
Sanitary Sewer Service Lateral Connection with Riser ............................ SC-09
Sewage Force Main 2” Connection ............................................................ SC-10
Small Diameter Sewage Force Main Service Connection to Gravity Sewer ...... SC-11
Termination for Dead-End Runs of HDPE Force Main (2” and Smaller) ..... SC-12
Pressure Lateral Assembly ...................................................................... SC-13

**UTILITY LOCATION & EASEMENT LAYOUT**

R-2 Conventional & Larger Lot Subdivisions ......................................... UL-01
R-3 & R-4 Conventional and R-2 Cluster Subdivisions ............................ UL-02
R-3 & R-4 Cluster Subdivisions ............................................................... UL-03
Townhouse Subdivisions on Public Roads .............................................. UL-04

**WATER DISTRIBUTION SYSTEM**

Blow-Off Detail ....................................................................................... WD-01
Sampling Station .................................................................................... WD-02
Air Release Valve ................................................................................... WD-03
Typical Fire Hydrant ............................................................................... WD-04
**WATER METERS**

Standard Water Meter Box & Fittings Up to 1” .............................................. WM-01

1-1/2” and 2” Water Meter and Service Connection ........................................... WM-02

Combined Domestic & Fire Service Meter Vault Detail ........................................ WM-03

Standard Water Subtraction Meter ........................................................................ WM-04

Temporary Hydrant Meter Assembly ..................................................................... WM-05

Standard Water Service Connection for Water Meter Sizes Up to 1” ........... WS-01
Concrete Notes:
1) Fc=3000 PSI AT 28 DAYS.
2) Carry all bearing surfaces to undisturbed earth or firm subgrade.
3) The anchorage dimensions shown are based on design water pressure of 150 psi. Where a higher pressure specification is required, the volume of the concrete (L x W x D) shall be adjusted proportionally according to the design pressure used.

Reinforcing Bar Notes:
1) Reinforcing Bars shall be hooked at each end and embedded minimum 8" into concrete. Exposed portion of all bars shall be painted with a minimum two coats of bituminous paint.
2) Where 3 bars are used, they shall be arranged as shown on the detail above.
3) Where 4 bars are used, 2 bars shall be located at each of end of the bend, symmetrically located on either side of the fitting.

</table>
**Notes:**
1) Dimensions D & E shall be adjusted based on required area for value of Hc.
2) Dimensions F & G are constant for a given pipe size.
3) Dimension D shall be adjusted for required pressure in excess of 150 psi before making adjustment for Hc (above).

**Soil and Concrete Notes:**
1) FC = 3000 psi at 28 days.
2) CS = Soil cohesion in psf
3) Φ = Angle of Internal Friction.
4) All bearing surfaces shall be carried to undisturbed earth or firm subgrade.

Fauquier County Water and Sanitation Authority

Buttresses for Tees, Plugs and Caps

Notes:
1) FC = 3000 psi at 28 days.
2) Buttress block dimensions are appropriate for design water pressure less than or equal to 150 psi.
3) Where design water pressure exceeds 150 psi, block dimensions shall be proportioned based on actual design pressure.
4) All bearing surfaces shall be extended to undisturbed earth or firm subgrade.
5) Tapping assemblies and sleeves shall be buttressed as comparably sized tees.
Notes:
1) FC = 3000 psi at 28 days.
2) Buttress block dimensions are appropriate for design water pressure less than or equal to 150 psi.
3) Where design water pressure exceeds 150 psi, block dimensions shall be proportioned based on actual design pressure.
4) Where soil bearing pressure is less than 2500 psi, dimension 'L' shall be multiplied by 2 and dimension 'M' shall be multiplied by 1.5.
4) All bearing surfaces shall be extended to undisturbed earth or firm subgrade.
Notes:
1) Pipe bedding shall be crushed stone not larger than 3/4 inch.
2) Pipe embedment shall be crushed stone not larger than 3/4 inch, or loose soil free of stones larger than 1 inch in their greatest dimension.
3) Initial backfill shall be loose soil free of foreign materials, frozen soil and stones larger than 3 inches in their greatest dimension.
4) Final backfill shall be loose soil free of foreign materials, frozen soil, and stones larger than 8 inches in their greatest dimension.
5) The top 6" (to finished grade) of final backfill shall meet the requirements for Initial Backfill.
6) Installation of DIP shall, in addition to the above, conform to ANSI/AWWA C600-99.
Pipe Embedment and Backfill for Plastic Pipe

Notes:
1) Pipe bedding and embedment shall be crushed stone not larger than 3/4 inch.
2) Initial backfill shall be loose soil free of foreign materials, frozen soil and stones larger than 3 inches in their greatest dimension.
3) Final backfill shall be loose soil free of foreign materials, frozen soil, and stones larger than 8 inches in their greatest dimension.
4) The top 6" (to finished grade) of final backfill shall meet the requirements for Initial Backfill.
5) Installation of plastic pipe shall, in addition to the above, conform to ANSI/AWWA C605-94.
Typical Gate Valve and Valve Box

Notes:
1. Valve and pipe shall have the same nominal diameter.
2. Valve boxes shall be centered over the valve wrench nut and set plumb.
3. Concrete collar to be poured square around valve box using wood forms when located out of pavement.
4. Valve extensions to be one rod only. Use of multiple extensions is prohibited.
5. All materials must conform to the applicable sections of the Fauquier County Water and Sanitation Authority's Approved Materials List.
Concrete Cradle and Encasement Notes:
1) Concrete to be class "B" unless otherwise specified.
2) Trench width shall be as specified in the USM or as shown on plans.
3) Reinforcing shall be provided as directed by the Authority Engineer or Inspector.
Sign: "Warning - Sewer (or Water) Pipe Crossing"
One at each end of Casing (typical).
As approved by VDOT, where applicable.

Existing Roadway

Steel Casing Pipe
Carrier Pipe
PSI Model S12-G2 Casing Spacer (typical).
Spacing per Manufacturer's Recommendation.

42" Cover

5' Maximum Spacing

Install PSI Model "S" Pull-On End Seal (One at Each End of Casing Pipe)

Notes:
1) Neat grout or sand will be pumped into the void between the carrier and the casing pipe at the direction of the Authority Engineer or Inspector.
2) All carrier pipe shall be restrained joint ductile iron and shall be pushed through the casing.
3) Casing spacers shall be sized to center the carrier pipe within the casing. Casing spacers shall be PSI Model S12-G2 or approved equal.
4) The number of casing spacers required will vary depending upon pipe sizes. Follow manufacturer's recommendation.
5) The gap between any casing spacer and the inside of the casing pipe shall be minimum 1/4" and maximum 3/4".
6) Casing end seals shall be PSI Model "S" or approved equal.
7) See plans for length of casing pipe (adjust in field as directed by Authority Inspector).

### Notes:
- Revised: 03/31/05
- Not to Scale
- Fauquier County Water and Sanitation Authority
- Design Calculation Sheet
Combination Air/Vacuum Release Valve for Sewage Force Main

Notes:
1. Installation to be located at high point of force main.
2. Pipe to be sealed with non-shrink grout at doghouse openings.
3. Concrete shall be a minimum of 4000 psi compressive strength.
4. 1.5" stainless steel support brace to be bolted to manhole walls and fasten to valve using a U-bolt clamp. Support brace shall not be positioned beneath manhole cover to impede entry.
5. All materials must conform to the applicable sections of the Fauquier County Water and Sanitation Authority’s Approved Materials List.
Notes:
1) The manhole insert shall be constructed of non-corrodable materials which will not be damaged by sewer gases or road oil.
2) Both the gas relief and the vacuum relief valves shall be self-cleaning and made of non-corrodable materials.
3) The gas relief valve shall be automatically activated at a pressure differential of approx. 2.25 psi.
4) The vacuum relief valve shall be automatically activated at a pressure differential of approx. 2.25 psi.
5) A properly fitted rubber gasket shall be installed under the lip of the insert to insure a tight seal between the insert and the manhole frame.
6) The insert shall be deep enough to prevent the manhole cover from coming into contact with the valves when the manhole cover is removed or installed.
7) The insert shall be designed to restrict inflow to no more than 1 gal. in 24 hrs.
**External Manhole Chimney Seal**

**Manhole Frame and Cover**

- 3/4" Mortar Joint
- Pre-Cast Concrete Adjusting Rings (where needed)
- Stainless Steel Top Band
- External Rubber Sleeve
- Stainless Steel Bottom Band
- External Rubber Extension (where required)
- Manhole Cone

**Standard (9") External Rubber Seal**

Note: Chimney seals shall be as manufactured by Cretex, or approved equal

**Chimney Height to be Spanned** | **Items Required**
--- | ---
0 - 3" | Narrow (6") Seal only
> 3" - 6-1/2" | Standard (9") Seal only
> 6-1/2" - 12" | Standard (9") Seal + Extension
> 12" | Standard (9") Seal + Multiple Extensions
Standard Internal Rubber Seal
by Cretex or approved equal

Note: Chimney seals shall be as manufactured by Cretex, or approved equal

</table>
Notes:
1) All manholes shall meet the current requirements of ASTM Specification C-476.
2) Concrete to be 4000 psi minimum compressive strength.
3) All reinforcing steel shall meet the current requirements of ASTM Specification A-615.
4) Tapered joint with O-Ring gasket shall meet the current requirements of ASTM Specifications C-361 & C-443.
5) Approved flexible joint shall be used on all pipe connections to manholes. Installation shall be in accordance with manufacturer's specifications.
6) 301 Mastic or approved equal shall be used in addition to the joint specified.
7) The entire exterior of the manhole shall be coated with 16 Mils DFT of Kop Coat 300M or approved equal. Coating may be applied at the factory, but any gouges and/or bare spots shall be touched-up before backfilling.
Notes:
1) All manholes shall meet the requirements of ASTM Specification C-478.
2) Concrete shall be minimum 4000 psi compressive strength.
3) All reinforcing steel shall meet the requirements of ASTM Specification A-615.
4) Tapered joint with O-Ring gasket shall meet the current requirements of ASTM Specifications C-361 & C-343.
5) 301 Mastic or approved equal shall be used in addition to the joint specified.
6) Approved flexible joint shall be used on all pipe connections to manholes. Installation shall be in accordance with manufacturer's specifications.
7) A minimum 6" of compacted gravel shall be placed under the base section of the manhole.
8) The entire exterior of the manhole shall be coated with 16 Mils DFT of Kop Coat 300M or approved equal. Coating may be applied at the factory, but any gouges and/or bare spots shall be touched-up before backfilling.
9) Manholes shall be designed and constructed in accordance with the Dimension Table below.

</table>

* Note: Manholes greater than 6' in diameter require a detailed design, which shall be included on the construction plans and profiles.
Notes:
1) See appropriate details for pre-cast concrete manhole construction requirements.
2) All piping for outside drop shall be constructed of Class 52 Ductile Iron Pipe with Mega-Lug restraints, including both sides of tee and 90° bend.
3) All piping shall be DIP Class 52 along the run leading to the manhole with outside drop.
4) Concrete blocking for 90° bend shall meet the specifications for water line blocking (see appropriate detail).
**Notes:**
1. The construction of an inside drop manhole is only permitted with prior approval of the Authority.
2. Only one inside drop connection per manhole will be allowed.
3. PVC drop pipe shall be the same diameter as the influent pipe.
4. Influent pipe slope shall not exceed 5%.
5. Maximum diameter of influent pipe shall not exceed 10".
6. Inside diameter of pre-cast concrete manhole shall be 60".
7. All inside drop pipe material shall be constructed using gasketed PVC SDR-35.
Notes:
1) The entire length of lateral shall be bedded in accordance with the appropriate FCWSA Detail for the pipe material used.
2) An appropriate riser shall be used where maximum depth requirement cannot be met (see Detail for Sanitary Sewer Service Lateral Connection with Vertical Bends).
3) Minimum slope for 4” laterals shall be 2.08%.
4) Minimum slope for 6” laterals shall be 1.00%.
5) Maximum slope shall be 4.16% for any lateral.
6) A 3M Brand, Full Range Sewer Marker, shall be located along the main at the point of connection for each lateral and at the terminal point of the lateral.
7) If no common utility easement is present then end of lateral and marker post shall be located relative to the property/easement line.
Notes:
1) The entire length of lateral shall be bedded in accordance with the appropriate FCWSA Detail for the pipe material used.
2) Minimum slope for 4" laterals shall be 2.08%.
3) Minimum slope for 6" laterals shall be 1.00%.
4) Riser slope shall be 1:1.
5) Maximum slope shall be 4.16% for any lateral.
6) A 3M Brand, Full Range Sewer Marker, shall be located along the main at the point of connection for each lateral, at each vertical bend and at the terminal point of the lateral.
7) The first vertical bend of the riser shall be located at the FCWSA utility easement line or a minimum of 5' from the main, whichever is greater.
8) If no common utility easement is present then the first vertical bend of the riser shall be located minimum 5' from the main.
Notes:
1) All methods and materials shall be in conformance with the FCWSA Utility Standards Manual (USM).
2) The 2" gate valve shall be installed with concrete support block in accordance with the appropriate detail form the USM.
3) Mechanical joint restraining glands shall be EBBA Iron Mega Lug or approved equal.
4) Force main connections may only be made with the specific approval of the General Manager.
5) All pipe shall be bedded in accordance with the appropriate FCWSA Pipe Embedment Detail.
Notes:
1. Gravity lateral shall conform to the standard sanitary sewer service lateral connection detail SC-08.
2. A line location marker shall be placed above the connection point to the gravity sewer main during backfill.
3. The force main service line shall be installed so as to provide a positive slope upward toward its terminus.
4. Ductile iron cap shall be lined with Protecto 401 ceramic epoxy. Threaded tap size shall depend on the pumping requirements.
Notes:
1) This Standard Detail shall be used for constructing the upstream terminus of any/all Sewage Force Mains constructed of HDPE pipe material which are 2” and smaller in diameter and which are to be owned and maintained by the Authority.
2) Manhole Cone-Section shall meet the current requirements of ASTM Specification C-476.
3) Concrete to be 4000 psi minimum compressive strength.
4) All reinforcing steel shall meet the current requirements of ASTM Specification A-615.
5) Manhole Frame and Cover shall be sealed to top of Cone with 301 Mastic and Bolted Down (Min. 4 Bolts).
6) 2” Curb Stop shall be Ball Type, compression fittings, by Ford or approved equal; shall be equipped with padlock wings.
7) Stainless Steel Inserts shall be used on HDPE Pipe at all fittings.
Notes:
1. All connections between force main and ball valve shall be fused HDPE.
2. Use Electro fusion tee to connect to HDPE force main.
3. Use tapping saddle to connect to PVC or ductile iron force main.
4. Pressure building sewer line size to be 1-1/4" to 2" depending on pumping requirements.
5. Stainless steel inserts shall be used on HDPE pipe at all fittings.
6. Pressure lateral assembly shall be located within a 30" diameter meter box to be privately owned and maintained by the property owner.
7. All other portions of the private force main or service lateral shall meet the pump manufacturer's requirements and recommendations.
When routing sanitary sewer around curves in the road, the manholes and the center line of the pipe shall be placed no closer than 5.0' from the Easement and ROW lines.

Notes:
1) All dimensions are minimums.
2) Typical sanitary sewer line location shall be 7.5' outside the ROW with a 15' utility easement.
3) Typical waterline location shall be 5' outside the ROW with a 10' utility easement.
4) Curve radii of less than 250' on water lines will necessitate the use of fittings. Where fittings are used, the waterline shall be routed so that the centerline of the pipe remains a minimum 3' from both ROW and easement lines.
5) Water valve boxes shall not be located in sidewalks, curbs & gutter or pavement.
6) This detail is applicable only for internal subdivision streets. Easement widths for all other streets and roads shall be in accordance with the Authority's Utility Standards Manual (USM) Section 1.09.
7) All design and construction shall be in accordance with the Authority's USM.
When routing sanitary sewer around curves in the road, the manhole and the center line of the pipe shall not be placed no closer than 3.0' from the easement and ROW lines.

Notes:
1) All dimensions are minimums.
2) Typical sanitary sewer line location shall be 6.0' outside the ROW with a 12' utility easement.
3) Typical waterline location shall be 3' outside the ROW with an 8' utility easement.
4) Curve radii of less than 250' on water lines will necessitate the use of fittings. Where fittings are used, the waterline shall be routed so that the centerline of the pipe remains a minimum 3' from both ROW and easement lines.
5) Water valve boxes shall not be located in sidewalks, curb & gutter or pavement.
6) This detail is applicable only for internal subdivision streets. Easement widths for all other streets and roads shall be in accordance with the Authority’s Utility Standards Manual (USM) Section 1.09.
7) All design and construction shall be in accordance with the Authority’s USM.
When routing sanitary sewer around curves in the road, the manholes and bar
grip ends of the pipe shall be placed no closer than 2.5'
from the Easement and ROW lines.

Notes:
1) All dimensions are minimums.
2) Typical sanitary sewer line location shall be 5.0' outside the ROW with a 10' utility easement.
3) Typical waterline location shall be 2' outside the ROW with a 5' utility easement.
4) Curve radii of less than 250' on water lines will necessitate the use of fittings. Where fittings are used, the waterline shall be routed so that the centerline of the pipe remains a minimum 2' from both ROW and easement lines.
5) Water valve boxes shall not be located in sidewalks, curb & gutter or pavement.
6) This detail is applicable only for internal subdivision streets. Easement widths for all other streets and roads shall be in accordance with the Authority’s Utility Standards Manual (USM) Section 1.09.
7) All design and construction shall be in accordance with the Authority’s USM.
When routing sanitary sewer around curves in the road, the manholes and the center line of the pipe shall be placed no closer than 2.5' from the Easement and ROW lines.

Notes:
1) All dimensions are minimums.
2) Typical sanitary sewer line location shall be 5.0' outside the ROW with a 10' utility easement.
3) Typical waterline location shall be 2' outside the ROW with a 5' utility easement.
4) Curve radii of less than 250’ on water lines will necessitate the use of fittings. Where fittings are used, the waterline shall be routed so that the centerline of the pipe remains a minimum 2' from both ROW and easement lines.
5) Water valve boxes shall not be located in sidewalks, curb & gutter or pavement.
6) This detail is applicable only for internal subdivision streets. Easement widths for all other streets and roads shall be in accordance with the Authority’s Utility Standards Manual (USM) Section 1.09.
7) All design and construction shall be in accordance with the Authority’s USM.
Notes:
1. A copper vent tube will enable each station to be pumped free of standing water to prevent freezing and to minimize bacteria growth.
2. Padlock provided by Fauquier County Water and Sanitation Authority.
3. All pipes, fittings, and fixtures shall be "lead-free" in accordance with NSF 372 Drinking Water Systems Components - Lead Content.
4. Provide 6" thick concrete pad centered around valve box if outside of paved areas. Pad shall extend a minimum of 6" beyond all sides of valve box using square wood forms. Valve box lid shall not be located within a sidewalk, pedestrian walkway, or curb & gutter.
5. Concrete filled painted safety yellow bollards to be installed per inspector if station is subject to traffic.
Notes:
1. Installation to be located at high point of water main.
2. Pipe to be sealed with non-shrink grout at doghouse openings.
3. Concrete shall be a minimum of 4000 psi compressive strength.
4. A 2" Flood Safe Inflow Preventer with mounting bracket shall be installed in areas subject to high groundwater or flooding. The inflow preventer shall be mounted to the wall of the manhole structure.
5. All materials must conform to the applicable sections of the Fauquier County Water and Sanitation Authority's Approved Materials List.
6. Standard manhole cover shall have "WATER" casted in 1-inch letters in the center and be furnished with a 1-inch vent hole. All other design and specifications of the manhole frame and cover shall be the same as those required for sewer construction.
Notes:
1. Hydrant to be placed with pumper nozzle facing the travel/fire lane.
2. No obstructions are allowed within 5 feet of the hydrant including landscape plantings.
3. Hydrant must be at least 5′ from driveway entrances.
4. Hydrant shall be installed at least 2 feet beyond top slope of any drainage ditches. Hydrant installation within the ditch line or slope shall be prohibited.
5. Where less than 3′-6″ is available between face of curb and sidewalk, center hydrant at least 2′ behind sidewalk.
6. Along streets of design speed of 45 mph and above, locate hydrant a minimum of 6′ from the edge of pavement or face of curb.
Notes:
1. Set meter box cover 1" above final grade.
2. All compression fittings shall include pack joints.
3. Meter box lid shall include a 1-3/4" hole for mounting a radio frequency meter interface unit.
4. The service line between the main and the meter shall be one continuous piece of pipe. No joints will be permitted.
5. Where service between the meter and water main is plastic tubing, a tracer wire shall follow the service/branch line to the meter box and shall be secured to the yoke bar.
6. No structures, poles, sign posts, trees, or shrubs to be installed within four feet of meter box.
7. Meter box shall be centered within a minimum 2' wide utility strip. Otherwise meter box shall be installed behind sidewalk. Meter box shall not be located within driveways, sidewalks or pedestrian walkways.
8. All materials must conform to the applicable sections of the Fauquier County Water and Sanitation Authority's Approved Materials List. All fittings and meters shall be "lead free" in accordance with the Safe Drinking Water Act.
9. Meters sized 5/8" x 3/4" and full 3/4" will be installed by the Authority upon construction approval and payment of appropriate fees.
10. See Standard Detail WS-01 for service connection requirements.

</tr>
<tr>
<td>1&quot;</td>
<td>24&quot; x 30&quot;</td>
</tr>
</tbody>
</table>
Notes:
1. See FCWSA Approved Materials List for approved manufacturers and part numbers.
2. Inlet valve and bypass valve shall include padlock wings.
3. Properly sized meter, including radio frequency meter interface unit and wiring, shall be provided by the developer.
4. A 36" diameter x 36" height one-piece meter box shall be used.
5. The service line between the main and the meter shall be one continuous piece of pipe (No joints will be permitted).
6. All compression fittings (including the corporation stop at the main) shall include grip joints.
7. Only 2" meter setter to be installed. Use a pair of meter adapters to extend a smaller meter to a 2" size.
8. No field adjustment of meter setter is permitted.
Notes:
1. Exterior vault dimensions shall be a minimum of (L x W x H) 6' x 6' x 6' with domestic tap made inside vault.
2. Bypass assembly shall include 2 ball valves to isolate meter.
3. Domestic line shall be type K copper pipe with grip joint fittings.
4. Vault to be installed on minimum 6" compacted VDOT #57 stone with filter fabric placed between bottom of vault and stone bedding. Filter fabric to extend vertically a minimum of 6" on all sides of vault.
5. Sump shall be piped by gravity to daylight or a sump pump provided. A VDOT Std. EW-12 endwall shall be installed at the outlet of the drain pipe with the opening covered by mesh or connect to a storm sewer inlet.
6. Vaults shall be non-buoyant when installed. Manufacturer to provide buoyancy calculations with assumed water table elevation at the ground surface. Calculations shall not include the weights of the piping installed.
7. Complete shop drawings shall be submitted to the FCWSA for approval. See Approved Materials List (Appendix D of the Utility Standards Manual) for additional design requirements.
Fauquier County Water and Sanitation Authority

Standard Water Subtraction Meter

**Finished Grade**

Angle Valve with Padlock Wings

14 Gauge Insulated Copper Tracer Wire Attached Here

**Meter Yoke Bar**

"Pig-Tail" (for connection to Irrigation System) to terminate 2' from meter barrel

**Ford Type 'A32-T' or 'C32-T' Meter Box Cover.**
Top to be set between 1/2" and 2" above finished grade.

**Angle Valve with Padlock Wings**

**14 Gauge Insulated Copper Tracer Wire Attached Here**

**Stainless Steel Inserts to be Used Inside Plastic Tubing.**

**Drain on Meter Side of Check Valve.**

**Ford HHCA94-323D-G**

**Ford AV94-323W-G**

**Ford Y502 Meter Yoke**

**Ex. Customer-owned Service Line**

**Prop. Subtraction Meter**

**Ex. Water Meter (Primary Service)**

**To House**

**To Irrigation System**

**Eyewear/R.O.W. Line**

**18" x 30" Round Concrete or PVC Pit-Setter**

**Angled Dual Check Valve (Cartridge Style)**

Fill Pit-Setter with Sand or Stone Dust
Bedding up to the Bottom of the Meter Yoke.

Connect To Customer Side of Water Service Line

6" Minimum

**Note:** ALL compression fittings shall include grip joints.

**Note:** Part Numbers shown on this Detail are from Ford Manufacturing Company products. Approved equals may be used.

**Note:** Meter box lid shall include a 1-3/4" hole for mounting a touch read pad.

**18" Min. 24" Max.**

**6" Minimum**

**18" x 30" Round Concrete or PVC Pit-Setter**

**Fill Pit-Setter with Sand or Stone Dust**

**Bedding up to the Bottom of the Meter Yoke.**

**Connect To Customer Side of Water Service Line**

**6" Minimum**

**NOTE:** Irrigation service line shall be connected to the customer's service line on the customer's side of the main meter.
Notes:
1. Fire hydrant water use shall be permitted on a temporary basis where a permanent water connection is not available, subject to the terms and conditions established in Volume 2, Part A, Section 5.5 of the Authority's Operating Code.
2. Start with hydrant and shut-off valve closed. Slowly open the hydrant until the backflow preventer is completely pressurized. After the device has been pressurized, vent all trapped air from both check valves by slightly opening each of the four test cocks. Slowly open the downstream shut-off valve. The hydrant meter assembly is now in service. **Do not close valves on the assembly or discharge line quickly.**
3. Contractor/Customer shall protect the hydrant meter assembly from damage, theft, and misuse.
4. Contractor/Customer is held responsible for any damage to the fire hydrant and infrastructure due to improper use.
5. Broken or damaged hydrant meter assemblies must be reported to the Authority immediately.
6. Contractor/Customer is responsible for any and all water consumption.

1. This Detail shall be the design standard for all new water connections. Exceptions must be approved by the Authority.
2. Provide a minimum 6 foot horizontal separation with sanitary laterals.
3. Provide a minimum 5 foot separation with driveways.
4. Taps shall be spaced a minimum of 36 inches.
5. A full range marker disc shall be placed directly over the service connection location during backfill.
6. An appropriately sized casing pipe shall be used whenever a service line crosses a road, sidewalk, and/or pedestrian walkway. See Casing Size Table for size and acceptable material.
7. All materials must conform to the applicable sections of the Fauquier County Water and Sanitation Authority’s Approved Materials List.
8. It is advisable to increase tubing diameter for unusually long service lines and/or branch lines. This will necessitate the use of appropriate adaptors in the meter box. Consult the Authority’s Engineer or Inspector for details.
